

# The Global Positioning System

The Global Positioning System technology that is available to consumers has changed rapidly over the last couple of decades. Most of you probably don't have dedicated GPS devices in your vehicles today because most phones are capable of doing more than our GPS devices could ever do. I say "most" of our phones because my father still uses an older flip phone and I know a few of those are still out there.

Here's a video about GPS that covers the data sources, GPS applications (from dog collars to the stock market), how it works (trilateration, atomic clocks, and quartz clocks), and more!

**[How GPS Works](https://youtu.be/loRQiNFzT0k)**  [.\(https://youtu.be/loRQiNFzT0k\)](https://youtu.be/loRQiNFzT0k)
